

Sensyflow FMT400-VTS, FMT400-VTCS Thermal Mass Flowmeter

Direct mass flow measurement of gases

- No additional pressure and temperature compensation

Wide measuring range up to 1:100

- Factory calibration with optional DAkkS / ILAC certificate
- Process gas calibration with clean gases and gas mixtures (optional)

High measuring accuracy

Quick response time ≤ 0.5 s

- Optimized for advanced control systems

Negligible pressure loss

No moving parts, no wear, maintenance-free

Defined and reproducible mounting position in the middle of the pipeline

- Pipe components for DN 25 ... DN 200 (1 ... 8")
- Weld-on adapters for larger diameters and rectangular ducts
- Reliable and convenient hot tap fittings

Versions designed for optimum practicality in applications

- FMT400-VTS process version (sturdy and flexible)
- FMT400-VTCS for the food and beverage industry
- Hygienic version, CIP- and SIP-enabled

Approvals for explosion protection

- ATEX zone 2 / 22 version: -20 ... 130 °C (-4 ... 266 °F)

1 General information

1.1 Principle of operation and construction

The devices of the Sensyflow FMT400-series operate according to the thermal measuring principle of a hot film anemometer. This measuring method determines the gas mass flow directly. Taking the standard density of the gases into consideration, the standard volume flow rate can be displayed without additional pressure and temperature compensation.

Sensyflow FMT400-VTS is used in the field of process engineering and Sensyflow FMT400-VTCS in the food and beverage industry for flow measurement of gases and gas mixtures.

The measuring systems of the FMT400 series are made up of a transmitter, flowmeter sensor and a pipe component. The transmitter directly delivers an electrically isolated 0/4 ... 20 mA output signal. The flowmeter sensor is designed as flange-mounted and is installed in the pipe component in a defined way.

The pipe component is available in nominal diameters ranging from DN 25 ... DN 200 (1 ... 8") and in various designs. It is also possible to install the flowmeter sensor in square ducts or pipes of any diameter by using a weld-on adapter.

Physics of measurement

Thermal flow metering procedures use different ways to evaluate the flow dependent cooling of a heated resistor as measuring signal.

In a hotfilm anemometer with temperature difference control, the heated platinum resistor is maintained at a constant overtemperature in relation to an unheated platinum sensor inside the gas flow. The heating power required for maintaining the overtemperature depends directly on the flow rate and the material properties of the gas. With a known (and constant) gas composition the mass-flow can be determined by electronically evaluating the heater current/mass-flow curve without additional pressure and temperature compensation.

Together with the standard density of the gas this results directly in the standard volume flow. Considering the high measuring range dynamics up to 1:150, an accuracy smaller than 1 % of the measuring value is achieved.

Fig. 1: Analog measuring principle

q_m	Gas mass-flow
R_{MG}	Gas temperature measuring resistor
R_H	Heating resistor
I_H	Actual value of heater

The gas stream flows past two temperature-sensitive resistors R_H and R_{MG} which are part of an electrical bridge circuit. Due to the chosen resistance ratio $R_H < R_{MG}$, R_H is heated by the current I_H , and R_{MG} adopts the same temperature as the gas. The current I_H is preset by the electronic control circuit to produce a constant temperature difference between the heated resistor R_H and the temperature of the gas.

The electrical power generated with resistor R_H exactly compensates its loss of heat to the gas flow. As this loss of heat is dependent on the number of particles which collide with the surface of resistor R_H , I_H represents a measure of the mass flow rate.

Typical applications

- Gas flow measurement in the chemical and processing industries,
- Compressed air balances,
- Gas burner control,
- Gas measurement for air separation systems,
- Activation air measurement in sewage plants,
- Hydrogen measurement in processes.

1.2 Type overview

Type	FMT400-VTS	FMT400-VTCS Hygienic version
Application	Process engineering	Food and beverage industry
Measured gases	Flow rate of gases and gas mixtures with known composition	Flow rate of air, N ₂ , CO ₂ , O ₂
Explosion protection	Manufacturer's Declaration zone 2 / 22 II 3G EEx nA ib II T4; II 3D T 135°C IP 65	
Design / Dimensions / Weight	dependent on nominal size	
Material (standard)	1.4571, Ceramics	Stainless steel e. g. 1.4301
Process connection (standard)	Flange acc. to EN1092-1 form B1, PN 40 (DIN 2635 form C) or ASME B 16.5 Cl. 150 / 300	Pipe fitting S acc. to DIN 11851 or FG flange
System components	Transmitter Flowmeter sensor Pipe component, design 1 or 2 or weld-on adapter	Transmitter Flowmeter sensor Pipe component
Standard nominal pipe sizes	Pipe component design 1: wafer flange DN 40, 50, 65, 80, 100, 125, 150, 200 – ASME 1 1/2", 2", 3", 4", 6", 8" Pipe component design 2: partial measuring section DN 25, 40, 50, 65, 80 – ASME 1", 1 1/2", 2" Weld-on adapter for square ducts or pipe diameters ≥ DN 100 (4")	Pipe component hygienic version: partial measuring section DN 25, 40, 50, 80
Degree of protection	IP 65 / NEMA 4X

Notes regarding measuring ranges	<p>The above values are reference values for applications involving air or nitrogen under atmospheric conditions (other gases available upon request).</p> <p>The values for q_{max} can be increased by approx. 10 % upon request (with lower accuracy in the extended range).</p> <p>With hydrogen and helium, the lower range limit is typically approx. 10 % of the upper range limit.</p>							
Measuring errors Air, nitrogen	<p>Under calibration conditions in specified measuring range</p> <p>≤ ± 0.9 % of the measured value ± 0.05 % of the possible end value in this nominal diameter (see measuring ranges)</p>							
other gases	<p>≤ ± 1.8 % of the measured value ± 0.10 % of the possible end value in this nominal diameter (see measuring ranges)</p> <p>Special calibration on request</p>							
Reproducibility	< 0.25 % of the measured value, t _{meas} = 10 s							
Effect of the temperature of the measured medium	< 0.05 % / K of the measured value (depending on the type of gas)							
Effect of the pressure of the measured medium	< 0.2 % / 100 kPa (/ bar) of the measured value (depending on the type of gas)							
Response time	T ₆₃ = 0.5 s				T ₆₃ = 2 s			

Type	FMT400-VTS	FMT400-VTCS Hygienic version
Operating conditions		
Recommended steadying lengths	According to DIN EN ISO 5167-1 Min. inflow 15 x D, outflow 5 x D	
Ambient conditions		
Transmitter ambient temperature	-25 ... 70 °C (-13 ... 158 °F) Zone 2/22 version: -20 ... 50 °C (-4 ... 122 °F)	
CIP/SIP cleaning	-	With device switched off
Storage temperature	-25 ... 85 °C (-13 ... 185 °F)	
Process conditions		
Operating temperature of measured medium (flowmeter sensor)	Standard range: -25 ... 150 °C (-13 ... 302 °F) Extended range: -25 ... 300 °C (-13 ... 572 °F) Zone 2/22 version: -20 ... 130 °C (-4 ... 266 °F)	-25 ... 150 °C (-13 ... 302 °F)
Operating pressure	4 x 10 ⁶ Pa (40 bar [580 psi])	1.6 x 10 ⁵ Pa (16 bar [232 psi]) threaded pipe connection S (for DN 80: 10 x 10 ⁵ Pa (10 bar [145 psi])) 10 x 10 ⁵ Pa (10 bar [145 psi]) FG flange
Pressure drop (logarithmic representation)	<p>< 1.0 kPa (10 mbar), typical value 0.1 kPa (1 mbar)</p> <p style="text-align: right;">G00796</p>	
Power supply		
Voltage	24 V DC ± 25 %; 24 V AC ± 25 %, 48 ... 62 Hz	
Power consumption	< 15 W, current consumption < 600 mA, minimum fuse protection 2 A time-lag	
Cable entry	M20 x 1.5	
Output		
Analog output	0/4 ... 20 mA, load < 750 Ω, electrically isolated, failure message < 3.5 or > 22 mA	
Degree of protection	IP 65, NEMA 4X	

2.1 Parameterization

The output signal range of the FMT400-VTS / VTCS flowmeters can be set to either 0 ... 20 mA or 4 ... 20 mA. Additionally, the measuring range window can be extended such that a smaller span corresponds to a 20 mA current signal. Alarm signalling is possible at < 3.5 mA or > 22 mA (selectable).

The measuring instrument parameters can be set via the LCI-adaptor. A standard PC allows you to change the used output signal and to adjust the measuring range.

Dimensions in mm (inch)

3.2 Installation instructions

3.2.1 Weld-on adapter for Sensyflow FMT400-VTS

Fig. 4: Dimensions in mm (inch)

- 1 Centering pin
- 2 Sealing ring groove
- 3 Connection flange DN 25 (1")
- D Outer pipe diameter

Flowmeter sensor length h in mm (inch)	Outer pipe diameter min. / max. in mm (inch)
263 (10.35)	100 ... 350 (3.94 ... 13.78)
425 (16.73)	> 350 ... 700 (13.78 ... 27.56)
775 (30.51)	> 700 ... 1400 (27.56 ... 55.12) ¹⁾

¹⁾ This maximum pipe diameter specification is only valid when installing the sensor unit centrally in the pipe. For larger diameters or angular ducts a non-centric sensor position is taken into account for calibration.

IMPORTANT (NOTE)

Prior to mounting the weld-on adapters must be shortened to length: $L = h - 1/2 D_{\text{outer}}$

The distance h between the upper flange edge and the pipe center line must be within a tolerance of $\pm 2 \text{ mm}$ (0.08").

The right angle to the pipe center line must be observed (max. tolerance $\pm 2^\circ$).

The centering pin of the adapter must be aligned centrally with the pipe center line in flow direction (on outlet run side, downstream of the measuring point).

3.2.2 Weld-on adapter with ball valve for Sensyflow FMT400-VTS

Fig. 5: Dimensions in mm (inch)

- 1 Centering pin
- 2 Sealing ring groove
- 3 Connection flange DN 25 (1")
- D Outer pipe diameter

Flowmeter sensor length h in mm (inch)	Outer pipe diameter min. / max. in mm (inch)
263 (10.35)	100 ... 150 (3.94 ... 5.91)
425 (16.73)	> 150 ... 500 (5.91 ... 19.69)
775 (30.51)	> 500 ... 1150 (19.69 ... 45.28) ¹⁾

¹⁾ This maximum pipe diameter specification is only valid when installing the sensor unit centrally in the pipe.
For larger diameters or angular ducts a non-centric sensor position is taken into account for calibration.

IMPORTANT (NOTE)

Prior to mounting the weld-on adapters must be shortened to length: $L = h - 1/2 D_{\text{outer}}$

The distance h between the upper flange edge and the pipe center line must be within a tolerance of $\pm 2 \text{ mm}$ (0.08").

The right angle to the pipe center line must be observed (max. tolerance $\pm 2^\circ$).

The centering pin of the adapter must be aligned centrally with the pipe center line in flow direction (on outlet run side, downstream of the measuring point).

3.2.3 Integrated hot tap fitting for Sensyflow FMT400-VTS

Fig. 6: Dimensions in mm (inch)

- | | |
|--|--|
| <ul style="list-style-type: none"> 1 Covers for DN 25 flange 2 Spigot nut 3 Bottom edge of spigot nut | <ul style="list-style-type: none"> 4 Display of sensor unit position, 50 mm (1,97") stroke 5 Sealing ring 6 Sensor elements |
|--|--|

Flowmeter sensor length h	
Water flange version	Weld-in version
h = 263 mm (10.35") for DN 50, DN 65 and DN 80 / 2", 3" h = 425 mm (16.73") for DN 100, DN 125, DN 150 and DN 200 / 4", 6", 8"	h = always 425 mm (16.73")

The integrated hot tap fitting is used instead of the pipe component and weld-on adapter assembly described above if the flowmeter sensor must be exchangeable during operation with virtually no gas escaping from the system.

Fig. 7: Maximum pressure/temperature values for the integrated hot tap fitting

It is recommended to use the hot tap fitting for measurements in main conduits (e.g. compressed air systems) or for measuring points which otherwise require rinsing prior to removing the flowmeter sensor. As a rule, hot tap fittings should be preferred for all systems where, otherwise, the entire system or parts of it must be switched off to replace a flowmeter sensor.

Handling:

The flowmeter sensor is screwed to the hot tap fitting through the DN 25 flange. Then the cover is put on. The sensor unit is set from the exchange position to the measuring position by turning the spigot nut. The bottom edge of the spigot nut indicates the current sensor unit position (see Detail A, sensor unit is in exchange position). Only when the measuring position 50 – OPEN - MESSEN (lower stop of the spigot nut) is reached, the sensor elements are placed exactly in the center of the pipe and exact measurement is ensured.

i IMPORTANT (NOTE)

For integrated hot tap fitting in wafer flange design DN 65, use connection flange PN16 with 4 screw holes on the process side. Wafer flange versions 2 ... 8" only for connection flange ASME B16.5 Cl.150.

Certificates and Material Traceability											
Material certificate 3.1 acc. EN 10204											CBB
Declaration of compliance with the order 2.1 acc. EN 10204											CF3

Footnotes see next page

- 1) Max. 8 bar / 0.8 MPa / 116 psi. With DN 25 ... DN 50 (1 ... 2 in.): Please use pipe component 2 with flow straightener.
- 2) From DN 100 (4 in.).
- 3) Not available with pipe component 1 in wafer flange version.
- 4) Not available with hot-tap-fitting.
- 5) Not available with flange style ANSI / ASME.
- 6) Not available with pipe component 2 in combination with flange style ANSI / ASME.
- 7) Please specify exact inner pipe diameter.
- 8) Correct sensor length: For pipe component 1 and 2 without ball valve / hot tap fitting: h = 263 mm. For weld-on adapter and pipe diameter up to 350 mm: h = 263 mm, up to 700 mm: h = 425 mm, > 700 mm: h = 775 mm
- 9) Not available with DVGW certificate. Correct sensor length: For pipe component DN 50 ... DN 100: h = 263 mm, from DN 125: h = 425 mm. For weld-on adapter up to 150 mm: h = 263 mm, up to 500 mm: h = 425 mm, > 500 mm: h = 775 mm
- 10) Not available with DVGW certificate. Correct sensor length: For pipe component DN 50 ... DN 80: h = 263 mm, for pipe component from DN 100 and weld-on adapter: h = 425 mm.
- 11) Not available with DVGW certificate. Please apply the correct sensor length.
- 12) Only for weld-on adapter without ball-valve. Only without certificates.

6 Recommended steadying lengths according to DIN EN ISO 5167-1

	
	<p>Expansion X = 15</p>
	<p>Reducer X = 15</p>
	<p>90° elbow X = 20</p>
	<p>Two 90° elbow in one level X = 25</p>
	<p>Two 90° elbow in two levels X = 40</p>
	<p>Valve / slide X = 50</p>

To achieve the stated measuring accuracy, the steadying lengths seen above must be provided. For combinations of inlet run disturbances, e. g. valve and reducer, you must always consider the longer inlet run length. In confined spaces at the mounting location the outlet run length can be shortened to $3 \times D$. The reduction of the minimum inlet run length, however, will impact on the achievable accuracy.

High repeatability of the measuring value is still provided. Under certain circumstances, special calibration can be performed for insufficient steadying lengths. For this purpose and in individual cases consulting is necessary.

For gases with extremely low density (hydrogen, helium) the steadying lengths must be doubled.
